DEANE, DRAY, & DEANE'S PATENT FIRE LUMP STOVE, adapted to the drawing-room, dining-room, and library, has three main qualifications which entitle it to public favour, and which have already secured for it the public preference. First, it is so cheap that the cost of a patent Fire Lamp, together with a chimney-piece, does not exceed the price of a common stove by itself; second, its capacity of radiating heat is greater than that of any other stove in existence; and, lastly, its economy of fuel is so considerable, that where it is adopted the expense of coal will be reduced by one half. The back, sides, and bottom of the Patent Fire Lamp Stove are all in one. It has no bottom grating, and the only metallic substance about it which comes in contact with the fire is the bars, while the fire part of the stove is so constructed that, as the fuel burns, it drops to a centre. The Patent Fire Lamp Stove has the unqualified recommendation of the first architects of the day.
